Members Present: Matthew Berg, Jay Currie, John Fuller, Michael Geneser, Paul Hanley, Barbara Mooney
Others Present: Shawn Albaugh Kleppe, Ben Curtis, Matt Getz, Don Guckert, Kevin Kregel, Jim Sayre, Ed Scherrer, Mike Tylka
Call to Order: Barbara Mooney called the meeting to order.
Previous Minutes: Minutes of the October 16, 2014, CPC meeting were approved as distributed.

ACTION / DISCUSSION ITEM(S):

**Campus Recreation and Wellness Center – Window Clings**

A proposal to install temporary window clings in the Campus Recreation and Wellness Center during the 2015 Big Ten Men’s Swimming and Diving, 2015 NCAA Zone Diving and 2015 NCAA Men’s Swimming and Diving Championships was presented by Matt Getz. These clings are one way vision window and glass graphics and are 100% transparent from the inside, can be easily removed after use and leaves behind no residue. The duration is approximately six weeks to cover all three events.

Discussion included the color selection of the graphics.

The committee supported this proposal with a unanimous vote.

**Power Plant Boiler 10 and 11 – Air Regulation Compliance – Boiler MACT**

To conform to regulations, changes to the exterior of the Power Plant's west façade were presented. Options included varied colored metal cladding to cover exposed tanks and a low rail system.

Discussion included questions about mandatory colors for the rail system and the cladding options.

The committee unanimously supported the motion for no cladding and a less dynamic color for the rail system.

**Boyd Law Building Banner**

The proposal to place a 10’ x 10’ banner on the southeast side of the Boyd Law Building, as well as two matching boulevard signs on the lamp posts in the Boyd Law Building court yard, was revisited. They would be displayed from March 20 to November 30, 2015. This time frame accounts for their annual admitted students' day and would remain up for the football season, during which time includes reunion week and sesquicentennial gala events.
Discussion included whether any city ordinances might apply.

Committee members unanimously supported this exception to the banner policy. As previously reported, representatives were instructed to work through Facilities Management for proper installation to guard against building damage.

**Biomass Fuel Project 2015 Pilot Planting**
A proposal to plant a plot of Miscanthus on the Hawkeye Campus along Melrose Avenue was revisited. The area for consideration is an area currently leased for planting rotation crops of corn and beans.

Committee members unanimously supported this proposal and as previously reported, suggested signage to showcase this test plot.

**UIHC Centralized Emergency Power Generation**
Design features of the UIHC Centralized Emergency Power Generation Facility were revisited for final review. Previous committee suggestions and guidance from the committee have been incorporated in the design. Design features are predominately louver panels and ribbed precast panel wall systems in charcoal gray hues. The three stacks are approximately 110’ in height.

Previous discussion included clarification on the screening of the load bank and additional screening from understory and overstory trees. Noise was touched upon also.

Committee members unanimously supported the design features as presented.

**OREP – Increase and Upgrade Electric Generating Capacity**
Rendered images of the stack associated with the mobile back-up generator for the Biomedical Research Support Facility was revisited. The stack height rises approximately 50” from grade alongside the generator.

Previous discussion included noise level of the generator and the noise abatement used, colors of the equipment intended and lay of the land around the generator that helps screen the generator.

Committee members unanimously supported this project as initially presented.

**IMU Historical Markers**
Information regarding the development of a historical marker master plan, as well as design, fabricate and installation of historical markers across campus was shared. This is a FEMA requirement as part of the recovery and mitigation of the 2008 flood event.

The components of this Memo of Agreement (MOA) include creating an overarching historical marker look and feel that unifies the entire system; establish an appreciation for the UI historical development and place it holds in the history of Iowa and the Nation; and heighten public awareness of the historic and architecturally significant aspects of the University of Iowa campus, as well as individual buildings, structures, sites and objects by drawing attention to important people, events, places and developments.

Discussion included how they following existing campus signage standards, focal points considered, whether placement may conflict with access of the bridge, the installation of signage in addition to what is being requested by FEMA, and material of signage.

This project will return for further clarification of scope.
Madison Street Residence Hall
Information on the upcoming Madison Street Residence Hall project was shared. The design/build construction model was explained, and conceptual designs for the building were presented.

This project will return for further clarification of scope and detail.

WORK SESSION REPORTS

Stanley Hydraulics Laboratory – Install Furniture for IIHR Plaza
A proposal for the installation of outdoor seating on the IIHR Plaza of the C. Maxwell Stanley Hydraulics Laboratory was presented. The furniture consists of five round tables with steel panel umbrellas and two straight three-seat benches surface mounted to the plaza. Five planters will also be installed.

Committee members supported this proposal in a working session.
